

## Rolls and sheets produced using continuous lamination process

### RECREATIONAL VEHICLE

- Flooring
- Interior walls

Driven by the market demand to expand its products range, Brianza Plastica has developed Elyplan Design, a composite laminate of excellent quality, characterised by the bonding of materials - such as PVC and PAPER - directly onto the fiberglass laminate in the production line.

It is normally used for indoor applications (e.g. floors and walls) of recreational vehicles as an excellent alternative to plywood because it is a ready-to-use composite element.

# ELYPLAN®

---

## DESIGN

### Rolls and sheets produced using continuous lamination process

#### PRODUCT FEATURES

- Widths of up to 3 m (PVC) and 2.2 m (PAPER)
